

MUSEUMRAILS™

Modular Reader Rail System

MuseumRails MR-GP Print Guidelines

Visible area is 9.5 x 42

Graphic file size should be 10.5 x 43 to allow for color wrap and final bleed.

The top and bottom will be obscured by the Reader Rail metal panel and the 0.5" on each end will wrap around to the edges and back side of the panel.

Checklist

- CMYK color mode preferred.
- Critical colors specified as PMS
- Panels require a bleed on all 4 sides beyond your finished panel size. This is an extension of your background colors and/or background images required to provide edge to edge printing.
- Panels require a .5" margin to the inside of your panel on all 4 sides. This provides .5" of a safety area between crucial foreground images, text, and the visible edge.
- Fonts fully outlined.
- Raster images 300 DPI at Full Size.

Software

- Preferred: PDF, Illustrator, Photoshop or InDesign

Color Samples can be produced for a small fee if desired. Color samples can be used to check font size and readability, color representation, image quality and many other concerns.
